

Concentration Notes

- Concentration measures how much stuff is mixed into something else
- The **solute** is a solid that is added
- The **solvent** is the liquid that the solute is added to
 - To make Hot Chocolate:
 - The mix is the solute
 - The water is the solvent
 - To make Kool-Aid
 - The mix the solute
 - The water is the solvent
- We use the terms **hypertonic**, **hypotonic** and **isotonic** to describe the amount of solute in different areas
 - If there more solute in one place it is hypertonic
 - If there is less solute in one place it is hypotonic
 - If the amount of solute is equal, it is isotonic
